DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Applicant is required to elect a specific SNP (mutation) for examination. Each SNP represents a different Group. So T114C is a Group, C386A is a group, etc. Applicant is required to elect a single SNP. Each SNP is distinct because it differs in chemical structure, in function, and effect from each other SNP. There is no relationship between SNPs, nor is there any necessary expectation for common effects or uses. The chemical structure of each polymorphism and of each molecule containing the same differ from each other. For example, a polynucleotide comprising T114C is chemically, structurally, and functionally different from a molecule comprising C386A.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed group for prosecution on the merits to which the claims shall be restricted.

ONLY A SINGLE SNP WILL BE EXAMINED.

Applicant is advised that a reply to this requirement must include an identification of the restriction subgroup that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The search and examination of all possible groups would pose an enormous burden on the examiner and on the PTO search resources. Because these inventions are distinct for the reasons given above and would require different searches that are

not coextensive, examination of these claims would pose a serious burden on the examiner and therefore the restriction is deemed proper.
